Double Hyacinths

Wonderful trusses of double flowers. Best planted out of doors. Mammoth bulbs in following colors: Crimson, Dark Blue, Light Blue, White, Rose, Yellow, Pink, Mixed. Price, 25c each, \$2.75 per dozen.

FOR POT CULTURE

Hyacinths are excellent for indoor growing. See that the pots are well drained and use the best soil possible. Plant the bulbs about an inch below the surface. Water thoroughly and put away in a dark cellar, or stand them out of doors and cover pot and all with about 8 to 10 inches of sand, dirt or ashes. Let them stand this way about 6 or 7 weeks or longer if necessary. The tops should be 4 inches high before brought in the house to the light. If brought in sooner the Hyacinths will make short, inferior flowers. A 4-inch pot will hold a good sized single bulb, and a 6- to 8-inch pot will hold 3 to 5 bulbs. The sprouts are yellow by keeping them covered in this way, but this does not matter, as they turn green quickly as soon as exposed to light.

WHITE

La Grandesse. The showiest pure white; fine bells; extra for exhibition; late.

L'Innocence. Pure white, large truss, the best all-round white Hyacinth; early.

Roman Hyacinths are fine to grow in pots for early bloom. Can also be planted out of doors. To have best results with Roman Hyacinths plant 4 to 6 bulbs in a 5 to 7 inch pot. Afterwards put these in a dark cellar or put them out of doors and cover them, pots and all, with about 8 inches of sand and let stand until tops are about 2 or 3 inches high. Then bring them in the house and they will soon bloom. 20c each, \$2.25 per dozen, post-paid, \$15.00 per 100.

OUTDOOR FALL BULB CULTURE

FOR OPEN-GROUND PLANTING.—Most of the suitable sorts should be planted in the fall, and they will flower the following season, commencing in March or earlier with Snowdrops, Crocus, etc., which are followed with Hyacinths, Tulips, Daffodils, and a host of other bulbous beauties.

TIME TO PLANT.—Remember that the "fall" is the time to plant all spring flowering bulbs. They

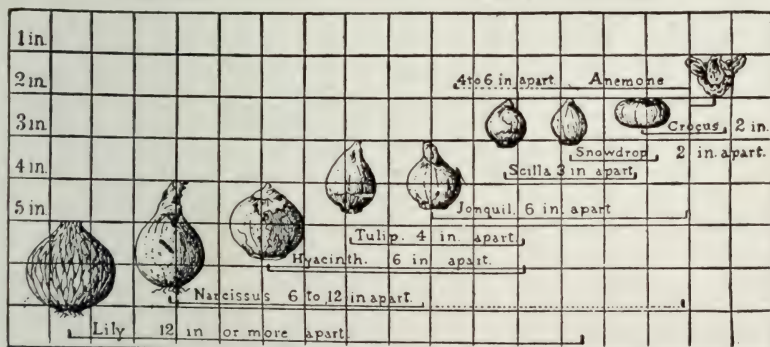

may be put in almost any time from October first until the ground freezes; in fact, we have succeeded with even later planting, but earlier planting brings best success.

HOW TO PLANT.—The soil should be well spaded, and the surface of the beds slightly raised at the center, so that no water will stand, but soak the bed good with water when first put in, then later if it

dries out. The soil will be better if enriched with well-rotted manure or bone dust.

AFTER TREATMENT.—All bulbs like a sunny exposure, and if protected from the north will bloom earlier. The bulbs do well for a number of years, without lifting or replanting. When through flowering the beds may be planted with shallow-rooted annuals, as nasturtiums, petunias, verbenas, etc. If necessary the bulbs may be taken up when the leaves begin to ripen, to be replanted the coming fall.

DIAGRAM SHOWING DEPTH TO PLANT OUTDOORS

Bulbs indoors do not require such deep planting as indicated in the diagram, there being no danger from freezing and thawing to guard against.

In order to have a beautiful bulb-garden, Narcissi should be planted very freely. They thrive in practically any climate in the United States and it is small wonder that the demand is doubling every year. They are not only excellent for outdoors, but millions are used every year for forcing indoors. We have compiled a list (as short as we could make it) of the best and most attractive varieties for indoor, outdoor, and exhibition purposes, and it is complete and easy to select from.

Culture. The same as Tulips, although they should be planted as close as possible in the open or pans. After active growth commences, give plenty of water.

Culture Outdoors. They should be planted so that the top of the bulb is at least 5 inches beneath the soil. A little protection should be given during severe winter weather, although they are perfectly hardy.

In our descriptions we use the following terms: **Perianth**—the outer petals of the flower. **Trumpet**—the long cup- or trumpet-shaped center. **Crown** or **Cup**—the short or flat center.

Trumpet Bicolor

For color, fragrance, beauty, and variety of form, nothing can equal these grand flowers; whether grown in pots or grouped in the hardy plant border, where their hardiness makes them so desirable, they are always an object of beauty.

Lily bulbs, being of late maturity, are not ready before November and December (the best time to plant them).

Wyatt's Evergreen Mixed Lawn Grass

In the South we often have trouble in getting good lawns because it has been found that no one grass will give satisfactory results at all seasons and on all soils. By careful experiments we have succeeded in getting a combination of grasses that will produce an evergreen lawn, giving permanency and beauty of sward. By the use of Wyatt's Evergreen Mixed Lawn Grass Seed a rich, velvety lawn can be made and maintained. One pound will sow a space of 10 by 25 feet or 250 square feet; 75 to 90 pounds to an acre. Lb. 50c; 5 lbs. at 45c per lb.; 10 lbs. or over at 40c per lb.; 25 to 50 lbs. at 38c per lb.; 100 lbs. at 35c per lb. By mail, postpaid, lb. 50c.

SUGGESTIONS FOR THE MAKING AND CARE OF LAWNS

It must not be supposed that by sowing grass seeds at any season of the year in soil of any character, and in any state of cultivation or neglect, a durable, attractive turf is to be formed. From the beginning the lawn is both troublesome and expensive, and even when obtained, it is like liberty, preserved only by "eternal vigilance." The coarser natural grasses and weeds will take possession unless kept down, and wherever, from any cause, a bare spot is formed it will rapidly enlarge unless repaired.

A good foundation must be secured, or the rest of the work will be entirely wasted, and too great care cannot be exercised, since the roots must be able to penetrate quite 18 inches in order to keep the grasses growing through the scorching days of July, August and September. If the ground is not already very rich, give a liberal application of fertilizer, avoiding the use of stable manure, as it invariably contains seeds of weeds and noxious grasses. Bone meal never produces the "burned" appearance so often noticed after the use of ammoniated fertilizers. Harrow or rake the surface to the finest possible condition and roll until all elevations and depressions have been removed.

Rake the seeds in lightly, following with a roller of medium weight, a firmly rolled surface being absolutely necessary if the ground be dry; small areas may readily be packed firm by the back of a spade. Sowings made in the Fall, from the first of October to the middle of December, are most successful, but if deferred until Spring, sowings may be made in February, March and April.

When the grass is well set, about 4 inches high, it should be cut with a sickle or mown with the machine set to avoid cutting too closely, 2 inches at least being left above the root. After that a cutting every ten days and an occasional rolling will make the grass finer, strengthen the turf and keep all rank-growing weeds in check. In the heat of Summer the mower should be arranged so as to leave ample protection to the roots. An occasional saturation is much better than the daily sprinkling

commonly thought beneficial. If bare spots appear they must be patched up by breaking the ground about 10 inches deep, smoothing the surface and raking in double the usual allowance of seed. To maintain the vigor and color of the grass a light

top dressing of bone meal two or three times a year is advisable. Liberal applications of sheep, poultry and cattle manure are very beneficial and will give your lawn that rich, velvety appearance that is so much admired by everyone.

For quick results apply a light dressing of Vigoro, Ammo-Phos., or Lawn and Garden Grower.

Flag Iris or Fleur de Lis IRIS GERMANICA

The Iris is one of the finest, if not the finest, of our hardy plants. Not particular as to soil or location, but asking only that the sun shine on it, it throws up spikes of bloom that are marvelous in their delicacy of structure and the colorings which are exquisitely dainty are wonderful in their blendings and variety. Give Irises plenty of lime.

They are very effective planted in groups, and if used for borders are particularly desirable in that the foliage remains fresh and upright after the blossom stalks are removed.

Do not cover the rhizomes (roots) too deeply.
